TEACHERS ASSISTANT APPLICATION USING ANDROID STUDIO

SUBMITTED BY

16MIS0041-J.SANTHOSH

16MIS0102-K.KARTHIKEYAN

FACULTY INCHARGE

Prof : DHINESH BABU L.D

ABSTRACT

Since ages, marking attendance has been one of the most important way to record and track the presence of students in schools, colleges. Attendance marking in different forms has been in use in various organization to record the presence of their human resource. This helps the organization in generating their month-end payroll, and other activities. Such systems may be manual or automated. Biometric-based system, card-based system are some of the examples of automated attendance system. In this project, an attempt has been made to record attendance through mobile devices. The aim of the project is to create an Android mobile application for attendance system that can be used by all teachers for their respective courses. This application fetches the details of the courses allotted to the respective faculty and the students enrolled in the courses from the server using the internet connection and stores it in the mobile database. This application stores the attendance in the mobile internal database and the faculty can view and update the attendance whenever required. At the end of the month, when the faculty is needed to upload the attendance, they can directly upload it from their mobile in the server provided the internet connection is available.

INTRODUCTION

The attendance system gives an ease in the working, managing and day-to-day functions of the system in an easy way through an intuitive interface that makes it easy for every faculty to utilize it fully and is virtually maintenance free. Our Attendance System simplifies the taking and maintenance of attendance through mobile devices. The system is deployed on every faculty's mobile and the faculty can take the attendance for their respective classes and store it in the mobile database. The software focus on the easy way of storing and uploading the attendance detail in the server with the use of mobile phones.

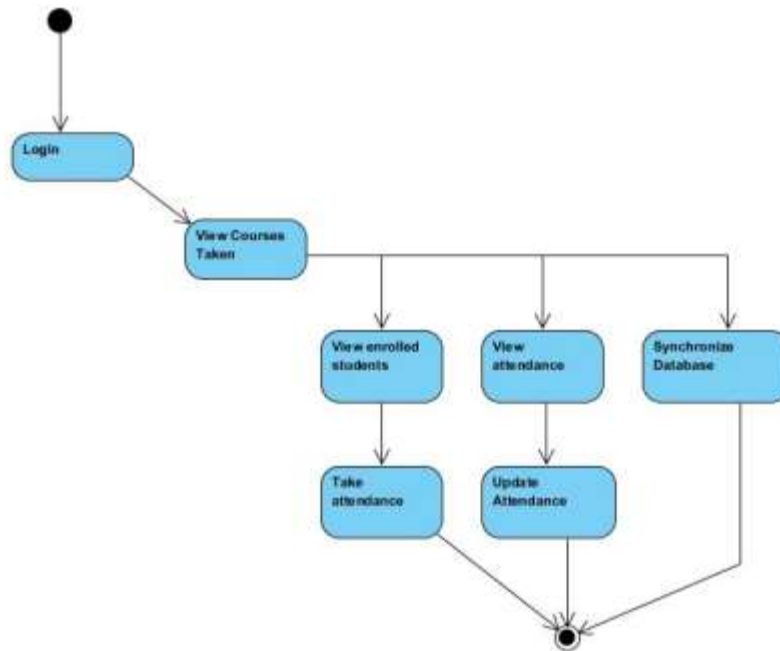

ANALYSIS

Requirement Analysis

The Application developed follows the following steps of SDLC. Under which the SRS model developed for the system is as listed below

The SRS model Contains

- Functional Requirements.
- Non-Functional requirements

1.Login

Description:

The faculty will login into the application with the given user ID and password. If the user ID and password is correct, user will be prompt to proceed option else error message will be displayed

Input: User ID and Password

Output: Prompt to "Proceed" option

2.View Course Taken

Description:

After login, the faculty can view the list of courses taken by him during the semester and then he can get the list of student enrolled in that course.

Input: Select the display option

Output: List of courses taken

3.View Details of Enrolled Students

Description:

The faculty can view the list of student enrolled in a particular course.

Input: Select a course and select option to display student list

Output: Enrolled student list

4.Take Attendance

Description:

Faculty take attendance on a particular day by swiping over a student name to mark him absent.

Input: Mark student absent

Output: Confirmation message

5.Synchronize Database

Description:

At the end of the month or at any time when faculty wishes, he can upload the attendance details of a particular subject in the Online Server

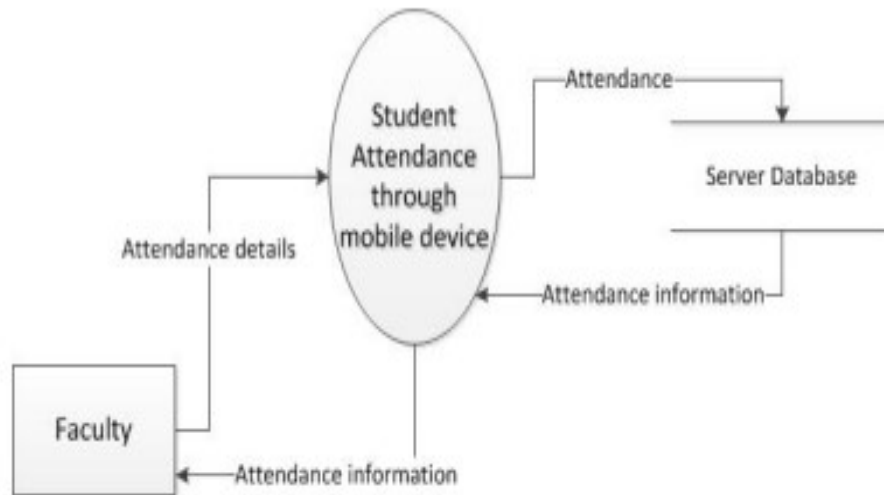

Input: Select Sync button

Output: Confirmation message

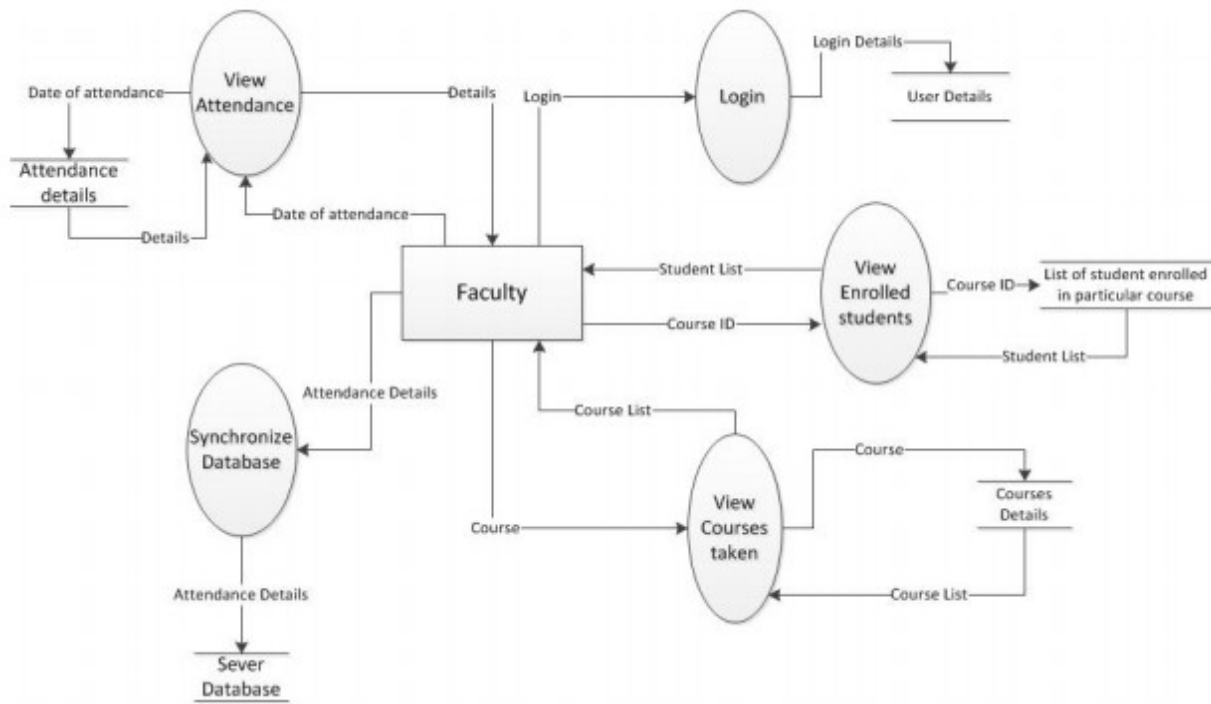

DESIGN

LOGIN

Newuser? Signup?

This is a mobile app login screen. At the top, there is a blue header bar with the text 'teacherassistant' and status icons for Wi-Fi, battery, and time (8:00). Below the header, there are two text input fields labeled 'name' and 'password'. A grey button labeled 'LOGIN' is positioned below the password field. At the bottom, there is a link that says 'Newuser? Signup?'.

SIGN UP

teacherassistant

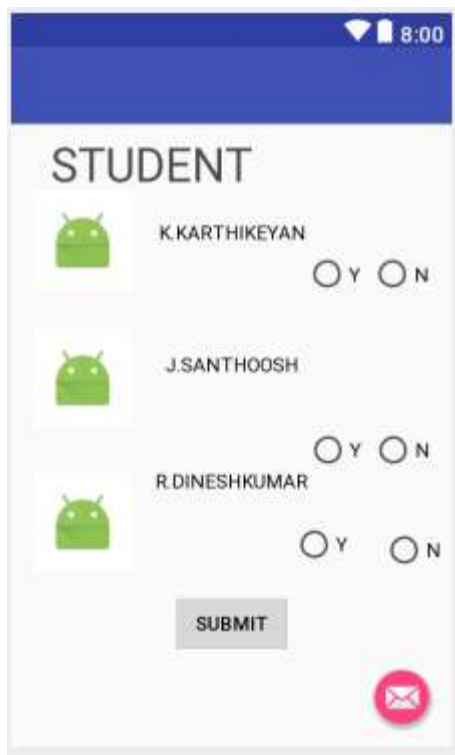

Name

BUTTON

Already signed in? Login

This is a mobile app sign-up screen. It has the same blue header bar as the login screen, with the text 'teacherassistant' and status icons. Below the header, there is a text input field labeled 'Name', followed by two empty text input fields. A grey button labeled 'BUTTON' is positioned below the second empty field. At the bottom, there is a link that says 'Already signed in? Login'.

Cgpa calculation

The screenshot shows a mobile application interface with a blue header bar containing the text "teacherassistant" and status icons (signal, battery, and time 8:00). Below the header, the text "ENTER YOUR SGPA" is displayed. There are eight input fields labeled S1 through S8. The S1 field contains the text "S1S2" and has a red underline. At the bottom of the form is a blue button labeled "FIND".

Chatting application

The screenshot shows a mobile application interface with a blue header bar containing the text "teacherassistant" and status icons (signal, battery, and time 8:00). Below the header, the text "Chatting" is displayed. The main area is a large white box with the text "Body here". At the bottom of the main area is a small blue button labeled "chat". Below the main area is a blue button labeled "SEND".

Conclusion

The attendance system through mobile devices is a very effective tool which can be used to a great extent. The system is portable and can be easily installed and used on any mobile phones supporting Android OS. The use of this system can result in a reduction of number of hours spent in feeding the attendance details in the server database. It also provides an interface which is easy to understand by the users and greatly helps in adapting to the use of this system.
